

1. Download the file and put the folder wherever you want mame to be (desktop, docs,...).
2. Start up mame by clicking the "mame64" application.
3. Down to the middle of your screen you should see the option "plugins", check that both "cheat plugin" and "cheat finder helper library" are ON.
4. Go back and search for your game of choice(I only downloaded the 4 roms needed for Project I).
 - a. If you can't find the correct version for your game, download the rom you need and place the .zip file under the "roms" folder.
5. Hit "enter" and as the game is starting hit "tab". A menu should appear.
6. Go to "plugin options" and enter "cheat".
7. Using the left and right arrow keys activate the cheats you desire.
 - a. If no cheats appear, hit "reload all", that should fix it.
8. Remember to set up your input preferences and add credit once out of the menu(using 5 if I remember correctly).
9. Hit 1 and enjoy being good at an arcade game. :)
